## Recovery Act Funding for Clean Diesel: National Clean Diesel Funding Assistance Program

Reducing emissions from diesel engines is one of the most important air quality challenges facing the country. Even with more stringent heavy-duty highway engine standards set to take effect over the next decade, over the next twenty years millions of diesel engines already in use will continue to emit large amounts of nitrogen oxides and particulate matter, both of which contribute to serious public health problems. These problems are manifested by thousands of instances of premature mortality, hundreds of thousands of asthma attacks, millions of lost work days, and numerous other health impacts and is part of a national campaign to reduce diesel emissions.

*Thank You!*

**Region 10 in  
Montrose for allowing  
us to use your  
facilities at our First  
Meeting in Montrose  
Colorado on Feb. 9th  
2009.**

## Clean Cities Project Alert

With the aggressive level of Clean Cities funding and huge support from Congress and the DOE, we live in truly exciting times. CleanFUEL USA is very honored and proud of the relationship they have established with Clean Cities organizations around the country; we have truly enjoyed working closely with many of the Coordinators over the last 15 years. As projects begin to develop all across the country, CleanFUEL USA is very excited to announce that our CFUSA/ConocoPhillips relationship is ready to launch our first phase of Propane (LP-Autogas) fueling stations at conveniently located Conoco branded stations across the US.

The first five cities are Atlanta, Chicago, Houston, Denver and Sacramento, where we will be installing a total of twenty-five stations for 24-hour fleet and consumer access. The second phase will include an additional fifteen cities and more than one-hundred CFUSA stations in ten states.

We are highly energized to join with our Clean Cities partners and local fleets to promote one of America's cleanest and domestically produced alternative fuels, helping establish sustainable fuel markets that will lessen our dependence on foreign sources of energy and reduce toxic and GHG emissions. With the Blue Bird Propane School Bus, the cleanest school bus in the country, leading the way, 2009 and 2010 will see both General Motors and Ford propane products return to the market place in a big way, with several pickup truck, van and bus options coming online. We are submitting this project grant to the DOE in partnership with Clean Cities Coalitions; this will allow us to double the impact of this important project as well as significantly decrease the time lines for site development.
